

# Logbook

# Logbook

The Logbook is the simple way to complete the legally required documentation for the operation of your ropeway.

Gather together the different stations belonging to one ropeway in just one operating logbook, eliminating the need for time-consuming document collation.

The system takes your team through the process step by step. Mandatory fields ensure that no task is missed and a simple structure helps ensure that documentation is submitted on time.

The Management Dashboard gives you central access to information about all of the ropeways operating in your resort. Data is constantly available, as it is centrally and securely stored in our ISO 27001 certified cloud.

The Logbook also operates offline, allowing you to access the most recently stored data, so you can work efficiently even in areas with low network coverage.

## ADVANTAGES

Easy to use on computer, tablet, smartphone

Access anytime, anywhere, no network connection required

Automatic data backup to the cloud

Automatic synchronization between all devices

Real-time communication between the installations and departments

Automatic data transfer by a single touch

Real-time information on all ropeways

Clear documentation of the operating day

Error prevention through mandatory fields increases operational safety

Software application for Skadii

Certified digital signature
